water drainage systems

# CASE STUDY

## LYNE PARK- ROSE BAY

**SAB601 Channel**

- Heel Guard Grate
- Anti Theft
- 150mmx150mmx1m

Lyne Park is a large Sydney Harbour foreshore park with a diverse range of recreation opportunities including a basketball court and public tennis courts. The park has large grassed areas, shady trees for picnics and a café. It provides access to Rose Bay boat ramp, a commercial seaplane base, and public and commercial ferry services.

The pathway around the popular park required drainage to stop the accumulation of water which created a slip hazard around/on the heavily trafficked pathway. SABDrain 601 grate & channel was installed in sections along the pathway to aid in quick & efficient drainage of water. The 601 Class B rated channel and grate has been designed to offer maximum versatility while delivering a lifetime of low maintenance service. Each galvanized gate comes with a 2 point security fixing, to keep it rattle free from vehicular movements and secure it from unauthorized access. Easily removed with a key, the 601 grates can be taken off for cleaning. This is a heel guard type grate, preventing heeled shoes, bike/pram wheels, dog paws and other objects from becoming stuck in the grate.
