

CHANNEL ACCESSORIES

END CAPS

The SABdrain end cap blocks the end of your drainage run, sliding in easily through pre-cut slots in the channel.

INSTALL CLIP

The install clip is designed to support and clip two channels together, ensuring installation is smooth, easy and quick. With a concept of one clip to fit all channels, this fancy new clip design from Italy can be flipped to meet the requirements and sizes from SAB500, SAB600, SAB700 & the SAB900 series.

DEBRIS BASKET

The debris collection basket is an accessory that is fitted in the drainbox and serves as a collector and retainer of large debris such as leaves and stones. The steel basket lets the water flow and retains stopping the rest, preventing impurities from clogging the pipes. The basket can be easily inspected and cleaned simply by removing the grate and taking it out.
